

MU 50

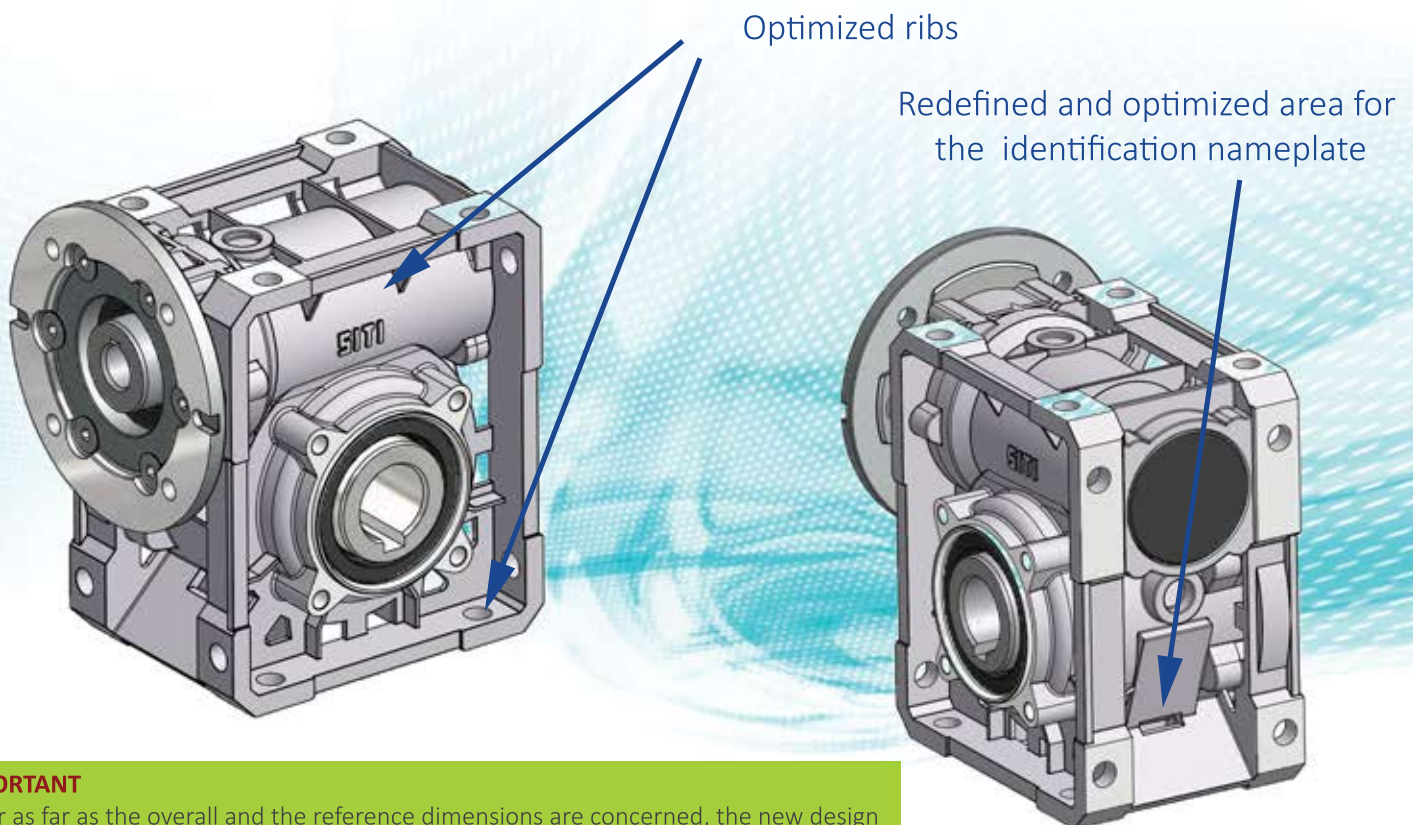

DESIGN REVIEW

SITI SpA is glad to introduce the restyling of wormgearbox MU50, in occasion of the die casting mold optimization. The design of MU 50 and its functionality are related to the improvement obtained from this restyling.

Advantages

- MU 50 improved housing design is smoother and it's far more suitable for washing. Moreover, it is now less subject to retaining environmental dirt
- Fixing points were improved, making the installation of the gearbox simpler and quicker
- The area reserved for the nameplate is wider, so that it won't come away easily

Main external look evidences

IMPORTANT

As far as far as the overall and the reference dimensions are concerned, the new design of the gearbox has not undergone any modification. Therefore the indications given on SITI catalogues remain valid
